

Create a quality online knowledge environment for your school community with...

Masterfile Knowledge Centre

A Knowledge Bank of Digital Content

Based on proven digital content management principles and practices, masterfile™ Knowledge Centre allows you to easily store, manage and metatag digital content that supports teaching and learning in education.

Capture and Reuse Education Support Material

Upload digital content easily, attaching notes, subject headings and relevant copyright information for fast retrieval.

Digital Video and Audio

Knowledge Centre simultaneously supports the ClickView and Commander commercial streaming video systems as well as in-house streaming video servers, delivering federated searching across these valuable collections.

Metadata

Metatag digital content, digital video and podcasts from the same authority files, attaching notes, subject headings, worksheets and related supporting material for fast retrieval.

Notification and Alerts

Automatically email selected groups of users or individuals about the availability of *all new content* that may be related to their special interests or teaching and research areas.

Metadata Standards Compliant

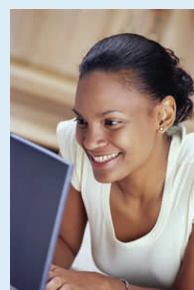

Metadata is the key to discovering resources. Knowledge Centre supports the TLF, IMS, SCORM, DC and USMARC metadata schemas and interoperability standards. You may also apply your own metadata sets.

Copyright Management

Make sure your school is copyright compliant. Ensure copy protected digital content is stored, secured, managed and disseminated to courses in accordance with Australian copyright guidelines, restrictions and expectations.

Store, manage and metatag your digital content in a standards-based digital library

Uploads all file formats and automatically alerts interest groups

Advanced Search Tools

Choose from a range of search fields in the Advanced Search, Boolean or Custom metadata search areas. Items can be retrieved by searching keyword, title, author, subject, notes, content, item format and category. Search for all items or images only. Selectively search across federated databases or search individual repositories, determined at search time.

Build A Valuable Knowledge Bank

Overlay the benefits of a traditional information management onto your digital knowledge assets which can be easily accessed at school or from home.

Ownership Management

Knowledge of authorship, ownership, copyright, and use rights of digital content is often limited in many schools. Knowledge Centre will automatically manage these increasingly important issues.

Manage Almost Any Learning Object

Knowledge Centre stores an extensive range of digital content including; Word, Excel and PowerPoint files, URLs, streaming video and audio, podcasts, ClickView, Commander, PDF, graphics, animations and web pages. All content is stored in its native format and enabled for *on-demand playback*.

Retrieval Options

Use a variety of federated search techniques, discovery methods and navigational aids including; simple search, advanced search, Boolean operators, Metafolder navigation, wizard searching, dynamic hyperlink navigation between learning objects, backward glance and history recall.

Federated Searching

A federated search gateway delivers simultaneous, seamless searching across multiple compliant local and remote databases, including Z39.50-compliant school library catalogue systems, to produce a single federated search result listing all available resources.

Broken Web Links

Automatically check web links for integrity, report on broken links and apply management rules to those that fail. Monitor usage and eliminate user frustration caused by *broken link syndrome* to ensure expected research information is always available.

Digital Rights Management

Digital rights require special consideration. Define schema for capturing and monitoring DRM requirements.

Deliver Content to Online Courses

Teachers quickly publish content directly from the Knowledge Centre to their online courses for student use.

Knowledge Centre Configuration

Tailor your Knowledge Centre to suit your school's requirements by selecting interfaces, menus, item types, authority files, thesaurus controls, security and other attributes.

Store

- ◇ Single files
- ◇ Web sites
- ◇ Web pages
- ◇ ClickView, Commander videos
- ◇ In-house streaming video
- ◇ TLF, IMS and SCORM packaged objects
- ◇ Drag and drop, batch and automatic upload

Index

- ◇ Title, author, subject, publisher, notes, content
- ◇ TLF metadata

Search Options

- ◇ Simple word or phrase
- ◇ Stem search
- ◇ Thesaurus driven
- ◇ Automatic compensation for subject misspelling
- ◇ Standard or weighted
- ◇ Federated searching
- ◇ Specific attribute and item combinations
- ◇ Boolean operators
- ◇ Specific metadata schemas and attributes
- ◇ Automatic links to related items
- ◇ Review search history and activity

Share

- ◇ Integrates with most LMS
- ◇ Publish to staff and community portals
- ◇ Assemble into topic-specific electronic binders
- ◇ Output to CD
- ◇ Via email
- ◇ Supports reference and publish distribution models
- ◇ Automatic new item notification and alerts
- ◇ Integrated with Masterfile Courseware and ePM

Manage

- ◇ Item currency and version control
- ◇ No item duplication
- ◇ Automatic show and hide dates
- ◇ Item ownership
- ◇ Quality checking via defined workflows
- ◇ Copyright compliance
- ◇ Remote access to subscription databases
- ◇ Copyright reporting
- ◇ Usage reports by item and user
- ◇ Automatically hyperlink related resources
- ◇ URL integrity checking
- ◇ Automatic image thumb nailing
- ◇ Security with AD and LDAP user authentication
